

Premiere continues its commitment to expand and ultimately eliminate the limits of our Customers. The **ALL NEW Powered Hand Slips (PHS™)** eliminate injuries when pulling heavy casing slips. Designed with an easy control panel that can be run by one person, the PHS™ system ensures the needs of lowering and lifting of the slips using hydraulic power.

The Premiere Hand Slips

Premiere's design criteria and accomplishment was to insure that the process will not unlatch the tool with the weight of even 1 joint lowered into the slips. This low profile system can be used from 16" – 22" casing with the interchangeability into a hand slip configuration within minutes. The tool has an opening so wide that float shoes and centralizers are able to clear through the bowl without having to split the tool.
