

Premiere is committed to enhancing our communications between the stabber in the derrick and the driller on the rig floor. Communications is critical for the safe operations and well being of not only the man in the derrick, but for all personnel on the rig floor. Being able to perform this function with a hands free tool has better enabled the continued efficiencies of the work environment while protecting our most critical asset, **"OUR PEOPLE"**.

The Premiere Hands Free Communication System

Our Communication Systems have been Approved to be Intrinsicly Safe for operations in explosive areas. This equipment is also waterproof, dust tight and extremely rugged for use in rough environments. It is also hand carried by the personnel that use it.

In hazardous work areas where radio signals are limited or may interfere with on-site devices, a hardline intercom system is the best overall choice for a two-way voice communication.

The Premiere Communication System is a full duplex intercom system that allows hands-free communication between workers for 100 % of the time and also provides the continuous human contact desired by workers who work in rugged and harsh environments.
